

TYLER COUNTY COMMISSIONERS COURT
SPECIAL MEETING
April 12, 2001 ~ 8:30 a.m.

THE STATE OF TEXAS ON THIS THE 12th day of April, 2001 the Commissioners' Court in and for Tyler County, Texas convened in a Special Meeting at the Commissioners' Courtroom in Woodville, Texas, the following members of the Court present, to wit:

JEROME OWENS	COUNTY JUDGE
C. D. WOODROME	COMMISSIONER, PCT. #1
RUSTY HUGHES	COMMISSIONER, PCT. #2
JOE MARSHALL	COMMISSIONER, PCT. #3
HENRY EARL SAWYER	COMMISSIONER, PCT. #4
WANDA JOHNSTON	CHIEF DEPUTY COUNTY CLERK, EX OFFICIO

The following were absent: none thereby constituting a quorum. In addition to the above were:

JOYCE MOORE	COUNTY AUDITOR
--------------------	-----------------------

Commissioner Hughes motioned to approve paying the **Tyler County Bills**. **Commissioner Marshall** seconded the motion. All voted yes and none no. SEE ATTACHED

Elaine Clow read a **Proclamation** designating April as **Child Abuse Prevention Month**. Several members of the Board were present. **Commissioner Sawyer** made a motion to approve the Proclamation which was seconded by **Commissioner Marshall**. All voted yes and none no. See attached.

Commissioner Sawyer made a motion to approve drug testing to be conducted by the Adult Probation office subject to obtaining approval from the Probation Board and assurance that there would be no legal repercussions. The motion was seconded by **Commissioner Woodrome**. All voted yes and none no.

A motion was made by **Commissioner Woodrome** to approve a \$525.00 bid for **delinquent tax property** from Wildwood Resort City, subject to approval by **Warren I.S.D.** **Commissioner Hughes** seconded the motion. All voted yes and none no.

Commissioners' Court
April 12, 2001

A motion was made by **Commissioner Woodrome** and seconded by **Commissioner Marshall** to approve the **Resolution** approving the articles of incorporation and bylaws of the **Texas CUC Aggregation Project (TCAP)**. **Commissioner Woodrome** gave report concerning the **Conference of Urban Counties** in which counties would join together to purchase wholesale electric power. Tyler County would save approximately \$10,000 by joining. The cost to join is \$1,075. All voted yes and none no. SEE ATTACHED.

Commissioner Sawyer motioned the meeting adjourned.

THERE BEING NO FURTHER BUSINESS, THE MEETING ADJOURNED..8:55 A.M.

SIGNED:  Jerome Owens, County Judge

 C.D. Woodrome, Comm. Pct. #1

 Rusty Hughes, Comm. Pct. #2

 Joe Marshall, Comm. Pct. #3

 Henry Earl Sawyer, Comm. Pct. #4

ATTEST:  Wanda Johnston, Chief Deputy Co. Clerk, Ex-Officio

RESOLUTION

WHEREAS, the Commissioners' Court of Tyler County wishes to obtain the lowest cost of electricity available in the restructured competitive market scheduled to open in Texas; and

WHEREAS, the Texas Conference of Urban Counties has formed the Texas CUC Aggregation Project, Inc. (TCAP); and

WHEREAS, TCAP will aggregate the purchasing of electricity for all member political subdivision in order to obtain electricity rates that are lower than any individual political subdivision could obtain by itself, or could obtain by any other means.

IT IS THEREFORE RESOLVED that the Commissioners' Court of Tyler County agrees to join the Texas CUC Aggregation Project, Inc., and:

1. Approves the TCAP, Inc. Articles of Incorporation and Bylaws (dated December 8, 2000) as presented;
2. Appoints C. D. Woodrome as the Representative of Tyler County to TCAP;
3. Approves and authorizes the payment of initial dues to TCAP in an amount of \$1,075.00; and
4. Designate the following list of Tyler County facilities, identified by name, service address and utility account number as facilities for which TCAP is authorized to purchase electricity.

Facility List:

SEE ATTACHED FACILITY LIST

Passed and approved this 12th day of April, 2001.

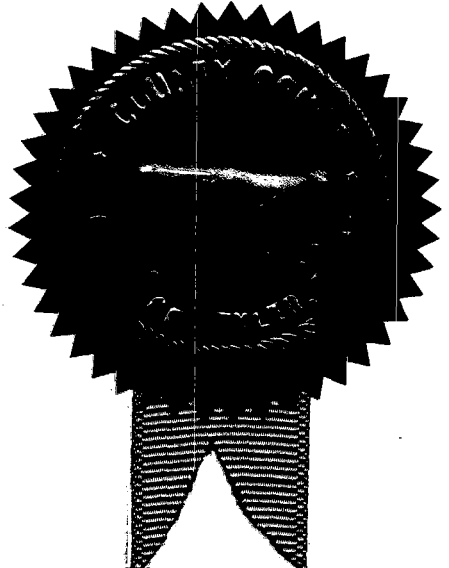

Jerome Owens, County Judge

C. D. Woodrome, Commissioner Pct. 1

Rusty Hughes, Commissioner Pct. 2

Joe Marshall, Commissioner Pct. 3

Henry Earl Sawyer, Commissioner Pct. 4

Child Abuse Prevention Month Proclamation

WHEREAS, Communities must make every effort to promote programs that benefit children and their families;

WHEREAS, Last year almost 47,000 victims of child abuse and/or neglect were confirmed in Texas and over three (3) million were reported in the United States;

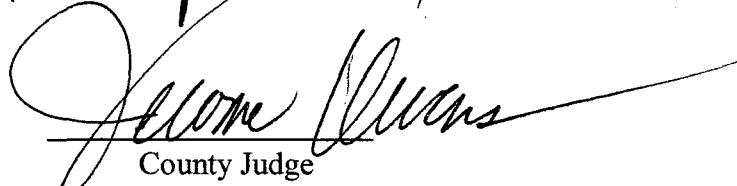

WHEREAS, Child abuse and neglect is a community problem and finding solutions depends on involvement among all the people throughout the community;

WHEREAS, Effective child abuse prevention programs succeed because of partnerships created among various governmental agencies, schools, religious and civic organizations, law enforcement agencies, and the business community;

WHEREAS, All citizens should become more aware of the negative effects of child abuse and its prevention; and become involved in supporting parents to raise their children in a safe, nurturing environment;

NOW, THEREFORE, I, Jerome Owens, County Judge, do hereby proclaim April 2001 as Child Abuse Prevention Month in Tyler County and call upon all citizens to increase their participation and efforts to prevent child abuse and neglect.

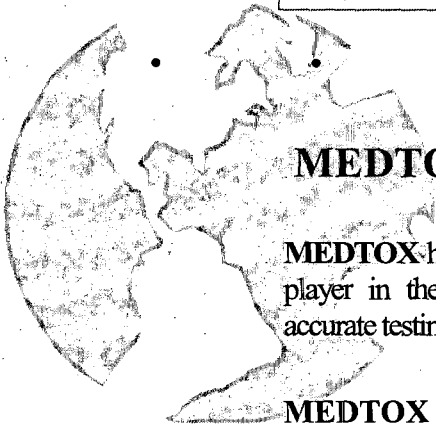

Dated this the 12 of April, 2001.

County Judge

MEDTOX Scientific:

"Focused On Meeting And Exceeding Client Expectations"

MEDTOX: A History

MEDTOX has a single goal in mind – to become the dominant player in the diagnostic drug screening market by providing accurate testing devices, excellent service and great value.

MEDTOX was founded in 1984 and became certified by the Federal Government in 1988 (SAMHSA). Through a 1996 merger, **MEDTOX** became a public company, currently traded on the American Stock Exchange. The result of this merger is a company that offers clients a unique combination of excellent laboratory service and quality diagnostic drug screening products.

MEDTOX received FDA 510(k) clearance on the VERDICT-II drug screening products in July 1998. Since that time, we have continued to make the diagnostic market a major focus of our marketing efforts. We are **committed** to this market, both now and in the future.

As you consider which vendor to select in the growing field of diagnostic drug screening, consider issues like experience, quality, financial stability, product innovation and overall value. **MEDTOX** has them all!

MEDTOX Diagnostics

VERDICT-II Devices

VERDICT-II devices are **FDA-510 (k)-cleared**, one-step tests for the rapid, qualitative detection of THC (marijuana), cocaine, opiates, amphetamines and PCP in human urine. The VERDICT-II devices come in a number of drug panel configurations:

5 Panel – THC/Cocaine/Opiates/Amphetamine/PCP

4 Panel – THC/Cocaine/Opiates/Amphetamine

3 Panel – THC/Cocaine/Opiates

2 Panel – THC/Cocaine

1 Panels –Any Single Drug

Cut-off levels for the VERDICT-II are:

THC (marijuana)	50 ng/ml
COC (cocaine)	300 ng/ml
OPI (opiates)	300 ng/ml or 2000 ng/ml
AMP (amphetamine)	1000 ng/ml
PCP (phencyclidine)	25 ng/ml

Accuracy & Sensitivity

In order to insure our position as the leader in diagnostic drug screening devices, **MEDTOX** performs extensive internal and laboratory-based Quality Control on each VERDICT-II lot throughout the manufacturing cycle of the product. **MEDTOX** also tests VERDICT-II devices against all proficiency samples sent by the College of American Pathologists (CAP) Urine Drug Screening Survey.

Results of the clinical trials performed for submission to the FDA were as follows:

Accuracy	- 98 – 99%
Sensitivity	- 95 – 100%
Specificity	- 99 – 100%
Reproducibility	- 99%+

As you can see, the VERDICT-II devices are some of the most accurate, sensitive diagnostic screening devices on the market.

Our Package Insert has all of this documentation. If you are considering an alternative product, ask for the package insert in order to compare their screening results versus confirmed, quantified GC/MS test results. We believe you will see a difference between VERDICT-II and other devices!

MEDTOX: Benefits To Clients

Since 1984, **MEDTOX** has developed a reputation for delivering superior benefits & service to our clients. The list of client benefits is extensive:

- **LIVE 24 Hour/7 Day Customer Service Coverage**
- **Chain-of-Custody Forms Available**
- **Option to send any specimen for GC/MS confirmation**
- **One-point Client Contact for ALL services**
- **Immediate shipment** – from MEDTOX plant to client location
- **BUY DIRECT FROM THE MANUFACTURER!**
(No middlemen, distributors, etc.)

MEDTOX is committed to the diagnostic market, and will continue to pursue ways in which we can add value for our clients. In the meantime, MEDTOX can save you money by eliminating middlemen, distributors and others who simply represent a mark-up on our products.

MEDTOX: Laboratory Testing

Automation and Robotics. These are the driving forces behind MEDTOX Laboratories. The company has invested in the systems necessary to deliver quality test results in the fastest time possible with the highest degree of customization available in the industry. Consider what MEDTOX has to offer:

- **54 stations** for Receiving & Processing specimens
- **10 Hitachi 747** Screening Systems (1500/hour)
- **3 CV1000** Specimen Aliquot Machines (1500/hour)
- **8 Automated** Extraction Systems
- **17 HP GC/MS** Systems

How does this benefit MEDTOX clients? Fast Turnaround Time!

1. **Negative Test Results** are available quickly
 - * Courier Routes: By **8 AM** CST
 - * Airborne Express: Between **10 AM – 1 PM** CST
2. **GC/MS Confirmations** are generally available within **36-48 hours** from time of specimen receipt

So even if your organization primarily uses diagnostic screening devices in your facility, MEDTOX does have the capability of providing confirmations via GC/MS. And should you prefer lab-based testing to diagnostic screening, MEDTOX has a full-service SAMHSA-certified lab ready to handle your needs.

Verdict-II Price List

<u>DEVICE</u>	<u>UNIT PRICE/BOX</u>	<u>VOLUME PRICE</u>

VERDICT®-II

A One-Step Qualitative Screening Assay for the
Detection of Cannabinoids (THC), Cocaine, Opiates,
Amphetamines and Phencyclidine (PCP) or
Their Metabolites in Human Urine

MEDTOX®

DIAGNOSTICS, INC.

1238 Anthony Road
Burlington, NC 27215

1. INTENDED USE

VERDICT-II is a one-step immunochromatographic test for the rapid, qualitative detection of cannabinoids (THC), cocaine, opiates, amphetamines and phencyclidine (PCP) in human urine. The test detects the major metabolites of these drugs at the following cut-off concentrations:

THC	Tetrahydrocannabinol	50 ng/mL
COC	Cocaine (Benzoyllecgonine)	300 ng/mL
OPS	Opiates (Codeine/Morphine)	300 ng/mL
AMP	Amphetamine	1000 ng/mL
PCP	Phencyclidine	25 ng/mL

This product is intended for use under medical supervision in hospitals, physician offices, health clinics and drug treatment/counseling centers. It is not for over-the-counter sale.

VERDICT-II PROVIDES ONLY A PRELIMINARY ANALYTICAL TEST RESULT. A MORE SPECIFIC ALTERNATE CHEMICAL METHOD MUST BE USED IN ORDER TO OBTAIN A CONFIRMED ANALYTICAL RESULT. GAS CHROMATOGRAPHY/ MASS SPECTROMETRY (GC/MS) IS THE PREFERRED CONFIRMATORY METHOD. CLINICAL CONSIDERATION AND PROFESSIONAL JUDGMENT SHOULD BE APPLIED TO ANY DRUG OF ABUSE TEST RESULT, PARTICULARLY WHEN PRELIMINARY POSITIVE RESULTS ARE USED.

2. SUMMARY AND EXPLANATION OF THE TEST

Marijuana is an hallucinogenic agent derived from the flowering portion of the hemp plant. Smoking is the primary method of use. Marijuana contains a number of active ingredients collectively known as cannabinoids. The primary cannabinoid in marijuana is THC. Marijuana use affects motor skills, eye tracking, and perceptual functions, but no consistent correlation has been established between the degree of use and the onset of physical effects.¹ Studies have

shown that passive inhalation of marijuana smoke under restrictive conditions of extreme exposure can result in the presence of detectable (greater than 20 ng/mL but less than 100 ng/mL) levels of marijuana metabolites in the urine of exposed individuals.¹ It has been found, however, that when a 50 ng/mL screening level is chosen, passive inhalation may be ruled out at the 95% confidence limit.^{1,2}

Cocaine is a central nervous system stimulant producing an intense feeling of euphoria. Although tolerance to and physical dependence on cocaine have not been demonstrated, psychological dependence probably develops.³ The two most prevalent methods of using cocaine are nasal inhalation (snorting) and smoking of the free-base form of the drug (crack).⁴

Opiates are a class of natural and semisynthetic drugs that include morphine, codeine and heroin. Opiates affect the central nervous system and produce feelings of euphoria. Abusers of opiates develop both a physical and psychological dependence on the drugs. Codeine and morphine are powerful analgesics used in prescription drugs. Heroin, a derivative of morphine, is truly an abused drug. Heroin can be taken several ways: smoking, nasal inhalation (snorting), subcutaneous injections (skin popping) and intravenous injections (mainlining).⁵

Amphetamines are mind-altering stimulants that excite the central nervous system. This group of compounds includes amphetamine, methamphetamine and related designer drugs that are similar both chemically and pharmacologically to the naturally occurring compounds, epinephrine and norepinephrine. Amphetamines produce a wakeful state accompanied by a sense of increased energy, self-confidence, well-being and even euphoria. Prolonged and/or high dose use of amphetamines can result in irrational behavior, poor mental acuity and paranoid behavior including psychosis.⁶

Amphetamines are usually taken orally, intravenously or by nasal inhalation (snorting). Smoking is a favored method of methamphetamine use. Methamphetamine is excreted in the urine in both the unchanged form and as the primary metabolite, amphetamine. Detection of amphetamine in urine is extremely dependent on urine pH, with alkaline conditions slowing excretion and acidic conditions increasing it.⁷

PCP is a hallucinogenic drug available in powder, capsule or tablet form. It may be taken by nasal inhalation (snorting), intravenously or orally. It may also be smoked after mixing with marijuana or other shredded leaves such as parsley or oregano.⁷

The effects of PCP are dose related but vary in severity from individual to individual. These effects vary from simple stimulation to schizophrenic psychosis. With large doses, mood changes are totally unpredictable and irrational, violent actions may occur. Trauma is one of the leading causes of death from PCP intoxication.⁸

Many factors influence the length of time required for drugs to be metabolized and excreted in the urine. The most important of these is the half-life of the drug. Half-life refers to the length of time the body requires to reduce the amount of a given drug in the blood by one-half. In addition to half-life, a variety of other factors influence the time period during which drug

metabolites are present in urine. These factors include the rate and efficiency of urine production, the pH, fluid consumption, the amount of drug taken and the length of time over which drug was consumed. Ingesting a large volume of liquid or using diuretics may increase urine volume thereby "diluting" the drug in a larger amount of urine making the presence of the drug more difficult to detect. The larger the dose of drug consumed, the longer the time required to reduce the level of drug in the urine to a point where it will no longer be detected. Also, if additional doses of drug are taken before earlier doses are fully eliminated accumulation of drugs or drug metabolites will take place and the time required for all traces of drug to disappear will be increased. Although the above factors make it difficult to arrive at any statement regarding how long after use a drug can be detected in the urine of a particular individual some general times have been establish and these are listed below.⁷

<u>Drug</u>	<u>Detection Period</u>
THC	
Single Use	1-3 days
Chronic, Light Use	3-29 days
Chronic, Heavy Use	Up to 12 weeks
Cocaine	8-72 hours
Opiates	
Heroin	2-5 days
Morphine	1-3 days
Codeine	1-3 days
Amphetamines	
Acid Conditions	1-3 days
Alkaline Conditions	3-10 days
PCP	
Single Use	7-8 days
Chronic Use	2-4 weeks

Laboratory-based procedures for detecting drugs/drug metabolites in urine include thin layer chromatography (TLC), gas chromatography/mass spectrometry (GC/MS), radioimmunoassay (RIA) and enzyme immunoassay (EIA).⁵⁻⁷ The qualitative VERDICT-II product utilizes one-step, solid-phase immunoassay technology to provide a very rapid test requiring no instrumentation. This test may be used to screen samples prior to confirmatory testing using quantitative procedures.

3. PRINCIPLES OF THE PROCEDURE

The VERDICT-II test is a one-step, competitive, membrane-based immunochromatographic assay. It allows a single urine sample to be evaluated independently for the presence or absence of each of the five specified drugs using a single test device. The test itself uses dye conjugated monoclonal antibodies which are highly specific for the target drugs. The VERDICT-II device contains a membrane strip which serves as the solid-phase. Each of the five drugs, conjugated to either bovine serum albumin (BSA) or immunoglobulin (IgG) is immobilized at a specific location on the membrane.

The test operates on the principle that highly specific immunochemical reactions occur between antigens and antibodies and that these interactions can be used to detect specific substances in biological fluids. Analytes present in the urine sample compete with analytes coupled to BSA or IgG for binding sites on the antibodies.

In this assay, the urine sample is placed in the sample well of the device, and the sample is allowed to migrate along the strip. If any of the five drugs are present in the urine sample, the drug forms a complex with the antibody-dye conjugate specific for that drug, and the complex migrates toward the opposite end of the strip, passing specific locations on the membrane where each of the five drugs is immobilized. Drug present in the urine sample competes with immobilized drug conjugate for the limited number of binding sites in the antibody-dye complex. Thus, when a sufficient amount of drug is present in the urine sample, the drug saturates the antibodies, and the antibody-dye complex cannot bind to the drug conjugate immobilized on the membrane so no line is generated at the drug-specific location in the result window. If drug is absent in the urine sample, as the antibody-dye migrates along the strip, the antibody complex will bind to the immobilized drug conjugate and a line is generated at the drug specific location in the result window.

In addition, a line must form at the Control position in the result window to indicate that the test is working properly. The Control line consists of immobilized polyclonal anti-mouse antibody which captures the monoclonal antibody-dye complex as it passes this region of the membrane. The presence of the Control line indicates that the proper sample volume was used and that the reagents are working properly. If no Control line forms, the test is considered invalid.

4. MATERIALS PROVIDED/STORAGE CONDITIONS

Each VERDICT-II test contains all the reagents necessary to test one urine sample simultaneously for all five drugs.

1. One VERDICT-II test device. The test device contains a membrane strip coated with drug conjugates and a pad coated with the five antibody-dye complexes (mouse monoclonals to THC, benzoylecgonine, morphine, amphetamine and phencyclidine) in a protein matrix.
2. One disposable sample pipette.

Kit Contents

The VERDICT-II test kit (Catalog Number 600594) contains the following:

1. Twenty-five (25) test devices in individual foil packages containing a sample pipette.
2. One instructional package insert

Storage Conditions

The kit, in its original packaging, should be stored at 2-25 °C (35-77°F) until the expiration date on the label.

5. PRECAUTIONS

1. Urine specimens and all materials coming in contact with them should be handled and disposed of as if infectious and capable of transmitting infection. Never pipette by mouth and avoid contact with broken skin.
2. Avoid cross-contamination of urine samples by using a new urine specimen container and pipette for each urine sample.
3. The VERDICT-II device should remain in its original sealed foil pouch until ready to use. If the pouch is damaged, do not use the test.
4. Do not store the test kit at temperatures above 25°C (77°F).
5. Do not use tests after the expiration date printed on the package label.
6. For in vitro diagnostic use only.

6. SAMPLE/COLLECTION AND PREPARATION

The urine sample should be collected in a clean glass or plastic container. Two drops of urine or approximately 100 µL is required for each test. Collection of 45 mL of urine is more than sufficient for initial and subsequent testing. No preservatives should be added. Urine may be tested immediately following collection. If it is necessary to store the urine, store under refrigeration for no more than one day. Urine may be frozen for longer storage. Stored urine must be brought to ambient temperature (18 to 25°C/64 to 77°F) and mixed well to assure a homogeneous sample prior to testing.

7. MATERIALS REQUIRED BUT NOT PROVIDED

1. Urine collection container.

NOTE: Specimen containers, disposable gloves and urine temperature strips are available from MEDTOX Diagnostics, Inc.

8. TEST PROCEDURE

1. Open one pouch for each sample to be tested and label the device with the patient or sample identification (ID).
2. Holding the pipette at a vertical angle, dispense two (2) drops of urine (~100 µL) into the sample well.
3. Read the results after 5 minutes but within 7 minutes of sample application.

9. READING THE TEST RESULTS

Negative: The appearance of both a reddish-purple Control (CTRL) line and a specific drug line indicates a negative test result. The color intensities of the Control line and a specific drug line may not be equal; any line of faint color intensity visible within 7 minutes indicates a negative test result.

Non-Negative: The appearance of a reddish-purple Control (CTRL) line and the absence of a line next to a specific drug name indicates a preliminary positive test result for that drug.

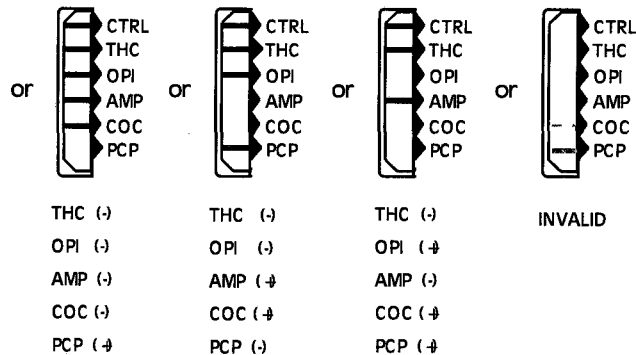

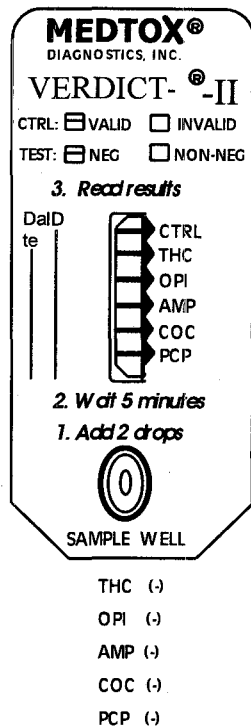

Invalid: The absence of a reddish-purple Control (CTRL) line indicates the test is invalid. The urine sample should be retested on a new VERDICT-II device.

10. INTERPRETATION OF TEST RESULTS

A NEGATIVE test result for a specific drug indicates that the sample does not contain the drug/drug metabolite above the cutoff level.

A POSITIVE test result for a specific drug indicates that the sample contains drug/drug metabolite at or above the cutoff level. It does not indicate the level of intoxication or the specific concentration of drug in the urine sample.

Examples of Negative and Non-Negative results are shown below.

There are other possible results depending on the drug or combination of drugs present in the urine sample.

11. QUALITY CONTROL

Quality control materials are available from commercial sources. These controls can be used as needed to verify performance of VERDICT-II on positive and negative specimens. The Substance Abuse and Mental Health Services Administration (SAMHSA) recommends use of a negative urine sample, a positive control fortified with specific drug metabolites, and a positive control fortified with specific drug metabolites at or near the cutoff concentration. Control materials should be run upon receipt of each new lot of product. Control materials may also be used to assess product performance on a daily basis or if discrepant results are obtained on test samples.

An internal procedural control is included on the VERDICT-II device. A line must form at the Control (CTRL) position in the result window to indicate that the test is working properly. The Control line consists of immobilized polyclonal anti-mouse antibody which captures the monoclonal antibody-dye complex as it passes this region of the membrane. The presence of the Control line indicates that the proper sample volume was used and that the reagents are working properly. If a Control line does not form, the test is considered invalid.

12. LIMITATIONS OF THE PROCEDURE

1. VERDICT-II is only for use with unadulterated human urine samples.
2. A positive result for any drug(s) in VERDICT-II does not indicate or measure intoxication. It only indicates the presence of specific drug(s) in the urine specimen.
3. Test results interpreted after 7 minutes may not be consistent with the original result obtained at the 5 to 7 minute reading. Disregard any results obtained after 7 minutes.
4. Certain medications containing opiates or opiate derivatives or amphetamines may produce a positive result in any chemical or immunological assay (see Specificity). Additionally, foods and tea containing poppy products and/or coca leaves may produce a positive result. Prolonged passive inhalation of THC may also produce a positive result.
5. There is a possibility that other substances and/or factors not listed above, e.g. technical or procedural errors, may interfere with the test and cause false results.

13. EXPECTED VALUES

The preferred method for confirming the presence or absence of THC, cocaine, opiates, amphetamines and phencyclidine and/or their metabolites in urine is GC/MS. This method detects specific drug metabolites as an indicator of drug use. SAMHSA recommends the following cutoffs for determination of positive samples by GC/MS⁹:

THC	11-nor-9-carboxy- Δ^9 -THC	15 ng/mL
COC	Benzoyllecgonine	150 ng/mL
OPI	Morphine and Codeine	300 ng/mL
AMP	Amphetamine	500 ng/mL
PCP	Phencyclidine	25 ng/mL

In contrast to GC/MS which detects a specific drug metabolite, immunoassay procedures detect not only specific drug but also multiple metabolites of specific drugs. To compensate for this cross-reactivity, the cutoff values for screening procedures for some drugs are set higher than for GC/MS. SAMHSA has recommended the following screening test cutoffs:

THC	Cannabinoids	50 ng/mL
COC	Cocaine (Benzoyllecgonine)	300 ng/mL
OPI	Opiates (Morphine and Codeine)	300 ng/mL
AMP	Amphetamines	1000 ng/mL
PCP	Phencyclidine	25 ng/mL

14. PERFORMANCE CHARACTERISTICS

Sensitivity

VERDICT-II detects cannabinoids (THC), cocaine metabolite, opiates, amphetamines and phencyclidine based on SAMHSA recommendations for screening of these drugs in human urine⁹.

THC	11-nor- Δ^9 -THC-9-COOH	50 ng/mL
COC	Benzoylcegonine	300 ng/mL
OPI	Morphine	300 ng/mL
AMP	Amphetamine	1000 ng/mL
PCP	Phencyclidine	25 ng/mL

Accuracy

For THC, COC, OPS, AMP and PCP a panel of naturally metabolized urine samples were analyzed using VERDICT-II and the Boehringer Mannheim qualitative CEDIA[®] assay for each drug and the results obtained in the two procedures were compared. Results are shown in the following tables.

ACCURACY OF VEREDICT-II COMPARED TO THE BOEHRINGER MANNHEIM QUALITATIVE CEDIA[®] ASSAYS

CEDIA MULTI-LEVEL THC (50 ng/mL cutoff)

		<u>Positive</u>	<u>Negative</u>	<u>TOTAL</u>
VERDICT-II	Positive	194	3	197
THC	Negative	10	477	487
	TOTAL	204	480	684

Overall agreement: 98% (671/684). Samples having discrepant results were analyzed by GC/MS. The three false positive samples were found to contain 16, 28, and 34 ng/mL while the ten false negative samples contained 32, 35, 41, 42, 46, 46, 49, 50, 50, and 90 ng/mL.

CEDIA COCAINE (300 ng/mL cutoff)

		<u>Positive</u>	<u>Negative</u>	<u>TOTAL</u>
VERDICT-II	Positive	96	8	104
COCAINE	Negative	2	578	580
	TOTAL	98	586	684

Overall agreement: 99% (674/684). Samples having discrepant results were analyzed by GC/MS. Of the eight false positive samples one contained 154 ng/mL while seven did not contain cocaine metabolite detectable at the GC/MS cutoff of 150ng/mL. The two false negative samples contained cocaine metabolite at 688 and 666 ng/mL.

CEDIA OPIATE (300 ng/mL cutoff)

		<u>Positive</u>	<u>Negative</u>	<u>TOTAL</u>
VERDICT-II	Positive	133	1	134
OPIATES	<u>Negative</u>	<u>0</u>	<u>550</u>	<u>550</u>
	TOTAL	133	551	684

Overall agreement: >99% (683/684). The discrepant sample was analyzed by GC/MS. The one false positive sample did not contain morphine or codeine detectable at the GC/MS cutoff of 300 ng/mL.

CEDIA AMPHETAMINE (1000 ng/mL cutoff)

		<u>Positive</u>	<u>Negative</u>	<u>TOTAL</u>
VERDICT-II	Positive	64	0	64
AMPHETAMINE	<u>Negative</u>	<u>2</u>	<u>618</u>	<u>620</u>
	TOTAL	66	618	684

Overall agreement: >99% (682/684). Samples having discrepant results were analyzed by GC/MS. The two false negative samples contained amphetamine at 2353 and 3569 ng/mL.

CEDIA PHENCYCLIDINE (25 ng/mL cutoff)

		<u>Positive</u>	<u>Negative</u>	<u>TOTAL</u>
VERDICT-II	Positive	56	2	58
PCP	<u>Negative</u>	<u>1</u>	<u>625</u>	<u>626</u>
	TOTAL	57	627	684

Overall agreement: >99% (681/684). Samples having discrepant results were analyzed by GC/MS. The two false positive samples did not contain phencyclidine detectable at the GC/MS cutoff of 25ng/mL. The one false negative sample contained phencyclidine at 28 ng/mL.

RELATIVE SENSITIVITY AND SPECIFICITY OF VERDICT-II COMPARED TO THE BOEHRINGER MANNHEIM QUALITATIVE CEDIA® ASSAYS

	<u>Relative Sensitivity</u>	<u>Relative Specificity</u>
THC	95% (194/204)	99% (477/480)
COC	98% (96/98)	99% (578/586)
OPI	100% (133/133)	>99% (550/551)
AMP	97% (64/66)	100% (618/618)
PCP	98% (56/57)	>99% (625/627)

**ACCURACY OF VERDICT-II
COMPARED TO GC/MS**

		<u>VERDICT-II</u>	<u>GC/MS</u>	<u>Values for Discrepant Samples (ng/mL)</u>
THC	Positive	48	50	
	Negative	52	50	35 and 46
COC	Positive	49	50	
	Negative	51	50	666
OPI	Positive	50	50	
	Negative	50	50	No Discrepant
AMP	Positive	48	50	
	Negative	52	50	2353 and 3569
PCP	Positive	49	50	
	Negative	51	50	28

Precision

Performance of VERDICT-II around the specific cutoff for each drug was evaluated by testing standard drug solutions diluted in drug-free urine in replicates of 20 each on 3 different days by 3 operators. Twenty replicates of drug-free urine were also tested on each day. At 25% above the cutoff, the precision of each assay was as follows: THC=95%, COC=100%, OPI=100%, AMP=100%, and PCP = 98%.

Reproducibility

A panel of 55 naturally metabolized human urine samples comprised of drug-free and contaminated samples was prepared. All samples in the panel had been screened for the presence or absence of THC, COC, OPI, AMP, and PCP. In addition each of the 55 samples had also been quantitated by GC/MS conducted at SAMHSA cutoffs for positive samples or at limit of quantitation for negative samples to determine the concentration of a specific drug. The concentration of primary metabolite in the positive samples was between 66 and 198ng/mL for THC, 487 and 1342ng/mL for COC, 464 and 2000ng/mL for OPI, 1056 and 4622ng/mL for AMP and 32 and 109ng/mL for PCP. The panel was used to evaluate the lot-to-lot and lab-to-lab reproducibility of VERDICT-II.

Lot-to-Lot Reproducibility

Three aliquots of each of the 55 samples were prepared and each of the three sets of aliquots was coded and used to evaluate the performance of one lot of VERDICT-II. There was one incorrect result (a false negative on an amphetamine low positive sample) on the 825 tests for a reproducibility of >99%.

Lab-to-Lab Reproducibility

Three aliquots of each of the 55 samples were prepared and each of the three sets of aliquots was tested by one study participant using one lot of VERDICT-II. There were three incorrect results (one false negative each on an opiate and a PCP low positive sample and one false negative on an opiate high positive sample) on the 825 tests for a reproducibility of >99%.

Specificity

Unrelated Compounds, Prescription and Over-the-Counter Medications

The following materials were tested for reactivity in the VERDICT-II test. Listed compounds were dissolved in appropriate solvents and then added to drug negative urine for testing. At 100 µg/mL all of the listed compounds were negative in each of the five VERDICT-II tests except for lidocaine and isoxsuprine. On the opiates portion of the test lidocaine was positive at 100 µg/mL and negative at 50 µg/mL. On the cocaine portion of the test isoxsuprine was positive at 25 µg/mL but negative at 10 µg/mL.

Acetaminophen	Chlorothiazide	Gentistic Acid
p-Acetophenetidine	Chlorpheniramine	Glutethimide
Acetophenetidin	Chlorpromazine	Guaiacol Glyceryl Ether

Nalidixic Acid	Oxymetazoline	Procainamide
Naltrexone	Papaverine hydrochloride	Promazine
Naproxen	Penicillin G	Promethazine
Niacinamide	Pentazocine	Propranolol
Nicotine	Pentobarbital	D-Propoxyphene
Nifedipine	Perphenazine	D-Pseudoephedrine
Norcodeine	Phendimetrazine	Quinidine
Norethindrone	Phenelzine	Ranitidine
D-Norpropoxyphene	Phenobarbital	Salicylic Acid
L-Norpseudoephedrine	Phenothiazine	Secobarbital
Noscapine	Phenylbutazone	Selegiline
Nylidrin	L-Phenylephrine	Serotonin
Octopamine	Phenylpropanolamine	Sulfamethazine
Oxalic Acid	Prazosin	Sulindac
Oxazepam	Prednisolone	Temazepam

Tetracycline
Tetrahydrozoline
Thiamine
Thioridazine
Tolbutamide
Trazodone
Trifluoperazine
Trimipramine
Trimethoprim
Tryptophan
Tyrosine
Verapamil
Zomepirac
Zolof

Non Crossreactive Endogenous Compounds

Fourteen compounds were dissolved in appropriate solvents and added to drug negative urine for testing. None of these compounds showed cross reactivity in VERDICT-II at 100 µg/mL.

Uric Acid	Estriol
Cholesterol	β-Estradiol
D,L-Thyroxine	Human Albumin
Tetrahydrocortisone	Acetone
Sodium Chloride	Acetaldehyde
Human Hemoglobin	Creatinine
Glucose Standard Solution	Epinephrine

Related Compounds

The following metabolites and related compounds were tested in VERDICT-II. Reference standards for the various metabolites and related compounds were prepared in negative urine samples. None of the materials related to one drug reacted with the remaining four tests in the VERDICT-II panel. Results are expressed as the minimum concentration required to produce a positive result in the indicated assay.

Cannabinoid

	<u>Result</u>
Cannabidiol	Negative at 100 µg/mL
Cannabinol	Negative at 100 µg/mL
L-11-Hydroxy-Δ-9-THC	Positive at 2.5 µg/mL
11-Nor-Δ ⁹ -Tetrahydrocannabinol 9-Carboxylic Acid	Positive at 50 ng/mL
11-Nor-Δ ⁸ -Tetrahydrocannabinol 9-Carboxylic Acid	Positive at 50 ng/mL
Δ ⁸ -Tetrahydrocannabinol	Positive at 1.0 µg/mL
Δ ⁹ -Tetrahydrocannabinol	Positive at 2.5 µg/mL

Cocaine

	<u>Result</u>
Benzoylcegonine	Positive at 300 ng/mL
Cocaine	Positive at 1000 ng/mL

Opiates

	<u>Result</u>
Codeine	Positive at 250 ng/mL
Diacetylmorphine	Positive at 250 ng/mL
Dihydrocodeine	Positive at 25 µg/mL
Ethylmorphine	Positive at 250 ng/mL
Hydrocodone	Positive at 100 ng/mL
Hydromorphone	Positive at 300 ng/mL
Levorphanol	Positive at 100 µg/mL
6-Monoacetyl Morphine	Positive at 250 ng/mL
Morphine 3-β-D-Glucuronide	Positive at 500 ng/mL
Morphine 6-β-D-Glucuronide	Positive at 500 ng/mL
Morphine	Positive at 250 ng/mL
Nalorphine	Positive at 50 µg/mL
Naloxone	Positive at 100 µg/mL
Oxycodone	Negative at 100 µg/mL
Oxymorphone	Positive at 100 µg/mL
Procaine	Positive at 100 µg/mL
Thebaine	Positive at 10 µg/mL

Amphetamine

l-Amphetamine
d-Amphetamine
Methamphetamine
Phentermine
Tyramine

Result

Positive at 75 µg/mL
Positive at 1000 ng/mL
Negative at 100 µg/mL
Positive at 10 µg/mL
Positive at 100 µg/mL

Phencyclidine

4-Hydroxy-Phencyclidine
PCP Morpholine Analog HCl
Phencyclidine

Result

Positive at 500 ng/mL
Positive at 50 ng/mL
Positive at 25 ng/mL

Memo

TO: To whom it may concern
FROM: Jim Pederson
RE: False positives and false negatives

As a federally certified lab, a GSA vendor and a vendor contracted to several states, MEDTOX has an obligation to clear up two of the misconceptions that have arisen over the years in the instant drug-testing field, false positives and false negatives.

Attached is documentation that addresses these two issues when using an instant testing device. These issues are important to you, whether MEDTOX, or someone else, is your supplier.

These documents are written in layman's language, and address questions and issues about which no vendor has taken the time to educate the user community.

Whether you are using our Verdict-II product or another companies instant testing device, if you have any questions about this information or any questions at all, please give us a call @ 800-832-3244 and ask to speak with Howard Claussen or Jim Pederson.

False Positives

What is a drug screen, as defined by the Federal Government?

In general, when you do a drug **screen** for opiates (for example), the concentrations all of the opiates and metabolites in the system are chemically summed. If the sum of all of the opiates is greater than 300 ng/ml, this is considered a positive screen for opiates. The same is true for all other classes of drugs. There are several opiates that are considered and included in the sum if they exist.

The same is true for all other drug classes tested, such as marijuana, cocaine, amphetamines and PCP. The sum of all marijuana metabolites must be higher than 50 ng/ml to produce a positive drug screen. Cocaine is 300 ng/ml. Amphetamines is 1000 ng/ml and PCP is 25 ng/ml.

What is important to note is that these are **Federal WORKPLACE guidelines** and the same guidelines that are used nationwide to determine impairment. Actually the workplace guideline for Opiates has been moved to 2000 ng/ml basically to accommodate such items as poppy seed rolls and so forth. The mandated market, which is just about everything but workplace, has kept their standard screen for opiates at 300 ng/ml.

What is a confirmation, as defined by the Federal Government?

Differing from a drug screen which sums the metabolites of a drug class, a confirmation tests the urine for the **single** metabolite with the highest concentration. Please refer to the chart below. **Confirmations do not confirm that a screen is correct.** They test for certain levels of a single metabolite (or drug) as in the table below.

Drug Class	Workplace		Number of Metabolites In screen	Mandated (LOQ)
	Screen Level ng/ml	Confirmation Level ng/ml		Confirmation Level ng/ml
Marijuana	50	15	7+	5
Cocaine	300	150	2	50
Opiates	300	300	5+	75
Amphetamines	1000	500	4+	75
PCP	25	25	1+	5

From the beginning there are some interesting items of note in the above chart. What happens when you have 7 metabolites of Marijuana each having a concentration value of 12 ng/ml. **You will have a positive drug screen of 84** ($7 \times 12 = 84$). Using the Federal Workplace guidelines for your confirmation, **you will be told by most laboratories that the drug test is negative for marijuana.** No metabolite is above 15 therefore you will consider your device to have made an error.

In reality, **both were correct**, according to Federal Workplace guidelines. ***Based on the guidelines for workplace, it is possible to have a Positive screen for any drug class and have a negative confirmation.***

This is what we call in the mandated world, the **ONE BLIND EYE CONFIRMATION**. If you use a little bit, we will turn a blind eye to it, and the labs won't tell you there is any drug in the urine, it is just reported out as negative.

There are two basic versions of a GC/MS confirmation.

1. Cut-off level confirmation (most commonly used in workplace)
2. Level of Quantitation confirmation (LOQ)

Number 2 is the one we should be concerned with. In reality, the difference between the cut-off level confirmation and the LOQ confirmation is a software switch on the GC/MS. The difference to you is the difference between being told if the urine has a concentration of drug in it, or not enough to be considered positive in the workplace.

Putting this in perspective, the world of workplace testing is one of testing for impairment. The mandated world (rehab, probation, corrections, missions and so forth) is a zero tolerance world. I doubt many in this world would say it is alright to use a little cocaine, just as long as you test below 150 ng/ml on GC/MS. Does this mean that 149 is ok??

If it doesn't mean that 149 is ok, you should look into LOQ confirmations. An LOQ confirmation will tell you if there is drug in the system. Most (probably over 75%) of the "false positives" you now see when using an instant device, are now **POSITIVES**. In your world is 149 positive for cocaine or not?

How did they legally get cocaine in their system?

Do you want to be informed that it exists, and the value is 149, or just negative?

Do you EVER want to be told negative, if the drug exists?

Why did no supplier of drug testing kits or your lab ever tell you this?

False Negative Drug Tests

Assume you have 100 urine tests to be done, and you test each. You find 5 positives with your instant drug-testing device. All 5 confirm as positive.

How accurate is the device you are using?

Is it 100% accurate. Most people think it is, and that is definitely the impression you are left with. The lab always tells you that the tests you send in are positive, just like the device you are using.

Ask yourself the following questions.

When was the last time I questioned a negative drug test?

Am I making the assumption that a device is always right when negative?

Why am I doing the first two items above?

Use the same 100 urine samples above. Use a different device. You find 8 positives with the instant drug-testing device. Seven (7) of the samples confirm positive.

How accurate is the device you are using?

Obviously if you are not comparing devices, and very few people go to the expense to do so, on the same urine sets, you will **ALWAYS FEEL** that the first device is more accurate. But the critical error is that you are **FEELING** it. Five out of five just seems more accurate than 7 out of 8, except when a false negative is considered. Are you choosing less sensitive devices, allowing positive samples through in order to reduce false positives. **Is it more harmful to have a false positive which will be caught by the lab, or a false negative YOU WILL NEVER CATCH?**

Is a false positive or a false negative a worse mistake.

A false positive may cost you \$25.

A false negative may cost you your reputation.

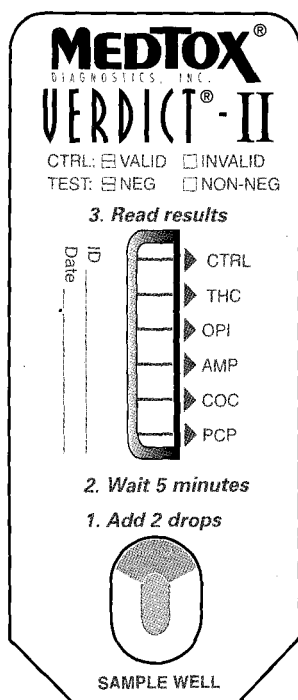

Or your client.

Are you testing to find drug use, or are you testing to find those who are not using?

MEDTOX[®]

DIAGNOSTICS, INC.

VERDICT-II INSTANT TESTING DEVICES

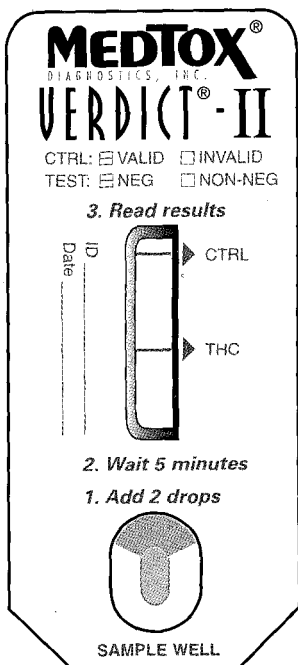

VERDICT-II FEATURES:

- FDA (510)k-Cleared
- Manufactured by a SAMHSA Certified Lab
- Training & Certification via MEDTOX Website
- Specimen Collection Supplies
- Customized Chain-of-Custody Form
- GC/MS Confirmations by our SAMHSA Lab
- Electronic Results Reporting

VERDICT-II DEVICE OPTIONS:

- THC (Marijuana)
- Cocaine
- Amphetamines
- Opiates
- PCP
- THC/Cocaine
- THC/Cocaine/Opiates
- THC/Cocaine/Opiates/Amphetamines
- THC/Cocaine/Opiates/Amphetamines/PCP

Re: Tax Suit number B-1736; Warren ISD, et al v. Nelson Hensley, Trustee; property described as Lot 79, Block T, Wildwood Resort; account number R 19707

Dear Judge Owens:

We recently received a bid on the property referenced above currently being held in trust. The bid was tendered by Cruse and Sharron Melvin. If accepted the bid would be distributed as noted below.

Amount of Bid: \$525.00
Less Court Costs of: \$525.00
Date of Tax Sale: March 1999
Amount to be distributed: \$ 0

AMOUNT OF BID
DOLLARS 525.00

	<u>Judgment Amt.</u>	<u>Percent of Total</u>	<u>Actual Recovery</u>
Warren ISD	\$1,481.25	70.40%	\$ 0
Tyler County	\$ 622.87	29.60%	\$ 0

Your assistance in presenting this information to the Commissioners Court and insuring that it gets placed on the agenda for action would be appreciated. Please feel free to contact me should you have any questions. Once action has been taken, please notify me in writing so that we may take the next appropriate step.

Very Truly Yours,

Douglas Steven Bird

Re: Tyler County Commissioner, Precinct 4

Dear Judge Owens:

Effective today's date, I am resigning my position as Commissioner of Precinct 4.

I have enjoyed my 10+ years of service to Tyler County and June and I are grateful to the people of Precinct 4 for their confidence in me to represent their needs. Working with the Democratic Party has been very gratifying. It has been a joy to work with our Commissioners' Court, all other elected officials and county employees. In my opinion, our Commissioners and our employees are the most cooperative in working toward the common goal of good government for our County.

It has been my privilege to serve the people of Precinct 4 and Tyler County. June and I will continue to take an active part in our community and we are looking forward to being active at a slower pace.

Sincerely,

Henry Earl Sawyer
Commissioner, Precinct 4

VACANCIES FILLED BY COMMISSIONERS COURT INCLUDE: County Judge, County Clerk, Joint District-County Clerk, County Attorney, County Treasurer, County Surveyor, Sheriff, Tax Assessor-Collector, Justice of the Peace, Constable (also Inspector of Hides and Animals and County School Superintendent if still in existence).

VACANCIES FILLED BY COUNTY JUDGE: County Commissioner.

VACANCIES FILLED BY DISTRICT JUDGE: District Clerk. (Where a vacancy occurs in a county having two or more district courts, the vacancy is to be filled by the judges of such courts. If they fail to agree, the governor, upon certificate of such judges, orders a special election to fill the vacancy for the unexpired terms.)

INSTRUCTIONS TO COUNTY CLERK:

Mail one copy of this form to: Secretary of State, Elections Division, P.O. Box 12060, Austin, Texas 78711. A commission and identification card will be issued to the appointee.

CERTIFICATE OF APPOINTMENT TO FILL VACANCY IN OFFICE

I do hereby certify that the below mentioned person was appointed by the

- County Judge
- District Judge
- County Commissioners Court

to fill a vacancy in the office of Commissioner, Pct. #4 until the next general election or end of the term, as appropriate. This vacancy was created by resignation and occurred on April 30, 2001¹ and effective on April 30, 2001².

I further certify that the appointee's oath and bond (if bond required) were filed in my office and in the Bond and Deputation records on April 30, 2001 (month/day/year)
